Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruinfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

When it is the state of the state of the state of a second and the state of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila meianogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Manmoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y?: cn bw sp. the same strain used for the BDGP's pland and how to order individual BAC Clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://werpar.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk · This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC and genet, in the DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CMSO2FE9 681 bp DNA linear GSS 13-MAY-2000

Determination of this BAC-end sequence was carried out as part of collaboration with the Backeley brosophila Genome Project (35GP). The BDGP is constructing a physical map of the Drosophila melanogaster agenome using these BACs. For further information please see http://www.fruitfly.org The BDGP brosophila melanogaster BAC library was prepared by Kazutoyo Googawa and Aaron Mammoser in Plater de Jong's laboratory in the Department of Canoer Genetics at the Roswell Park Canoer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECONI diselion of Prosophila DNA provided by the BDGP from the isogenic strain v2: on bw 8p, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalc.edu/drosophila_bac.htm.

Determination of this RAC-end sequence was carried out as part of collaboration with the Berkeley prosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila Aaron Mamoser 18AC library was prepared by Kazutoyo Osoegawa and Aaron Mamoser 18AC library was prepared by Kazutoyo Osoegawa and Aaron Mamoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Suffalo, NY. The library is named RPCI-98 and was constructed by partial Scoral disestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ζŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QΔ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazuchoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI diseation of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC sesource Center can be Location/Qualifiers

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.ecgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                    | SIDS2/goddata/geneseq_geneseqn_embl/Nal980.bar:*

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP indroysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tanger disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q31. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and ciner disorders associated with hypercholesterolemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for
                  Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      are also useful as diagnostic indicators of cardiovascular disease other discreers associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1643 BP; 370 A; 413 C; 457 G; 403 T; 0 other;

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP Mydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholestrol stores. ABCI is defective in Tanglac disease, a genetic chorder obstacted by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are iseful for developing pharmaceutical agents for the treatment of neart disease and other disorders associated with hypercholesterolemia and atheroscierosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorded with hypercholesterolemia.

```
transfer vector encodes and expresses a reporter molecule. The method further involves introducing into the cell a gene transfer vector comprising a nucleic acid segment encoding a transactivator protein the transactivator protein the transactivator protein, or an agonist of the transactivator protein, with the transactivator protein, and agonist of the transactivator protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGTGGGGCCGGGACCCGCAGAGCCGACCCTTCTCTCTCCCGGGCTGCGGCAGGCCAG 1169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               332
                                                                                                                                                                                                                 The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density inpoprotein-cholesterol (HDL-O) level, a higher than normal trigiveride level, or a cardiovascular disease, involving administering a compound that modulates LNR- or RNR-mediated transcriptional activity or ABCl expression or activity. The LNR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition lower than normal HDL cholesterol level, a higher than normal trigiyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                355
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    475

The invention relates a nucleic acid which is capable of requiating the transcription of human ATP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholosterol metabolism, including diseases such as atherosclerosis. Polynucieotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholosterolaemia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2416 GAGCTCTCTCTCCCCCAFTCCCTCCGGCTGAGGAAACTAACAAAAAAAAA 2475

The present sequence is one of a large number of 5' ESTS derived from manas encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS water prepared from total human RNAs or polyat RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences of the second to the full suited for isolating cDNA sequences because they are obtained, the full 5' UTR is rarely included. S' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in clasgostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human: ATP binding cassette transporter 1, ABC1; coronary heart disease; dermatological; atherosclerosis; cardiovascular; inflammatory disease; psoriasis; lipid disorder; antibacterial; septic shock; gene therapy; immunosuppressive; lupus erythematosus; rheumatoid arthritis; ds.

The invention relates to four common polymorphisms in the gene encoding ATP-binding cassette transporter-1 (ABG1). ABG1 is associated with ABG1 decreased ApgA-1 mediated efflux of cholesterol. The polymorphisms in ABG1 directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABG1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases (psoriasis, lupus erythematosus). The identification of ABG1 as a transporter for interleukin-lbeta (Li-lotta) identifies this gene as a candidate for treatment of inflammatory diseases including theumatoid arthritis and septic shock. The present sequence is human ABG1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         467 AAACCCCGTAATTGCGAAGCGAGGAGTGGGGGCCGGGACCCGCAGAGCCGAAGCCGACCC 526

                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of CDNA encoding the human adenosine triphosphate (ATP) binding cassette transporter 1 (ABC1) protein (see AAM50227). The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AAI70314, using an alternative ATC codon as initiation codon and thereby adding an alternative ATC codon as initiation codon and thereby adding an alternative ATC codon as initiation of the encoded ABC1 protein (see AAM50228). The invention provides 4 common polymorphisms in the ABC1 gene. These were identified by sequencing the ABC1 gene in the AAI70314, G is changed to A at position 596, T is changed to C at position 136, A is changed to G at position 589 or G is changed to C at position 136, A is changed to G at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed to C at position 2589 or G is changed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         457 AAACCCCGTAATTGCGAGCGAGAGTGAGTGGGGCCGGGACCCGCAGAGCCGAGCCGACCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding casette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atheroscierosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholesterolaemia and atheroscierosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, ATP-binding cassette 1; ABC1 gene regulation; atherosclerosis; cholesterol metabolism; hypercholesterolaemia; antisense therapy;

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dT primer and an oligonuclectide complementary

to the complementary strand of a polynuclectide which comprises one of

complementary strand of a polynuclectides; or (b) a combination

of an oligonuclectide comprising a sequence complementary to the

complementary strand of a polynuclectide which comprises a 5'-end

sequence and an oligonuclectide compriser a 5'-end sequence complementary to a

complementary strand of a polynuclectide which comprises a 5'-end

sequence and an oligonuclectide compriser as sequence, where the

coligonuclectide which comprises a 3'-end sequence, where the

coligonuclectide which comprises as 1'-end sequence, where the

coligonuclectide comprises at least 15 nuclectides and the combination of

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primer sets can be used in matisense therapy and

conditionally full-length cDNAs. The primers are also useful for the

color particularly full-length cDNAs. The primers are also useful for the

color and/or dagmosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

colors as a sequence and an end of a sequence and a AAH13629 to AAH13632

AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to

chepsent oligonuclectides, all of which are used in the exemplification

of the full-length cDNAs. all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                    Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                            Yamamoto J;

The present invention describes primer sets for synthesising 5602 comprises: (a) an olique-dr primer and an oliquoudleotide complementary to the complementary strand of a polynucleotide which comprises one of a polynucleotide which comprises one of a polynucleotide which comprises one of an oliquoucleotide comprises at least 15 nucleotides; or (b) a combination of an oliquoucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oliquoucleotide comprising a sequence complementary to the polynucleotide which comprises a 3'-end polynucleotide which comprises a 3'-end sequence complementary to a liquoucleotide comprision at least 15 nucleotides and the complementary to a oliquoucleotide comprises a 1'-end sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the S'-end sequence is selected from those defined in in gene therapy. The primer sets can be used in antisense therapy and particularly full-length conservation without soft sets of the abnormality of the proteins encoded by the full-length conservation of the abnormality of the proteins encoded by the full-length conservation in the primers allow obtaining of the full-length conservation in the full-length conservation in the full-length conservation in the full-length without any specialised methods. The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligounclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the sequence and an oligonucleotide comprises at least 15 nucleotides and the combination of complementary strand of a polynucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence 3'-end sequence 15 selected from those defined in the specification. The primer sets can be used in antisense therapy and the specification. The primers are useful for synthesising polynucleotides. Particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for AAH13628 and AAH13633 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to Fine and AAH13633 to AAH13632 to AAH13632 to Fine and AAH13633 to AAH13

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dI primer and an oligonucleotide complementary to the complementary strand of a polypurcleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the collegence confides one of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, sequence of an oligonucleotide sequence and sequence, and an oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence and sequence, and the compination of the sequence and sequence and sequence and polynucleotide of in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length onlyns. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assisy without any specialised methods. AAH13632 to AAH1

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elaring to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activities activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δŽ
                                                                                    The invention relates to an isolated human large AIP-binding cassette transporter 1 (ABC1) promoter capable of directing transcription of transporter 1s used to be a sequence positioned downstream to it. The hABC1 promoter is useful for expressing foreign DNA in a host ce.1, by introducing into the host cell a gene transfer vector comprising the promoter operably linked to a foreign DNA in a destroop do promoter operably linked to a foreign DNA is expressed. The gene transfer can be introduced into the host cell by adenovirus infection, liposome-mediated transfer, topical application to the cell or microinjection. The gene transfer vector encodes and expresses a reporter molecule. The method further involves introducing into the cell a gene transfer vector comprising a nucleic acid segment encoding a transactivator protein capable of upregulating the ABC1 promoter, or contacting the cell with the transactivator protein, or an agonist of the transactivator protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1009

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) i gene. ABC1 resides in cell membranes and utilises ATP Mydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholsterol stores. ABC1 is defective in Tangler disease, a genetic cholsterolise stores. ABC1 is defective in Tangler disease, a genetic choracterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treamment of and atherosclerosis. The genes associated with hypercholesterolemia and atherosclerosis. The genes associated with hypercholesterolemia to escreen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                  Adenosine triphosphate (AIP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1532 ACTAGICCCGGCAAAAACCCCGGTAATIGCGAGCGAGAGTGAGTGGGGCCGGGACCCGCAG 1591
